

GREG SMITH

COVER LETTER

Dear Resi,

I am writing this cover letter in support of my application for the position of Ruby on Rails Engineer with your company. I recently graduated from the Le Wagon coding bootcamp on their Full-Stack Developer programme. During this time I built two fully functioning rails web applications, the last of which was demoed at the Google Campus (the video of this can be found on my LinkedIn - and links to these sites can be found on my CV). For both of these applications I was the lead contributor and was able to provide assistance to the rest of my team when stuck on problems. On our main project, *GlobeUp* - a social media and events site for young women who are moving abroad and want to find a like-minded group - I designed the site on Figma, created a self-referencing API for a clean auto-completing search function, and was able to implement a multi-tab messaging dashboard for users to manage chat-rooms from the same page using action cable.

Before learning to code I graduated top of my class from the University of Bristol studying Anthropology, after which I lived in the Canadian Rockies for a year before starting a position as a graphic designer and e-comm manager back in London. I wanted to expand my knowledge and was tired of not understanding the problems developers were having with my requests, which is why I embarked on the Le Wagon course. I loved every minute of it and am eager to find a role where I can work on an engaging project such as the one you have built and continue to learn further. Thanks for taking the time to read my application.

Best,

Greg
